DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Naudet (5,039,277). Naudet discloses a method for improving the wear characteristics of a system for operating a variable vane comprising the steps of: providing a trunnion 12 connected to said variable vane 11 via a vane platform 13 and means for causing rotation of said trunnion (Figure 1); and positioning a thrust washer 14 formed from a carbon material (Column 3, lines 24-29) about a lower portion of said trunnion and in a space between said vane platform and an outer split case 16 so that during operation of said system said space between said vane platform and said outer split case is maintained substantially constant and unwanted deflection of said vane is avoided. In regards to claims 2, 3 and 12, since Naudet discloses a thrust washer made of a carbon material, it is the position of the Examiner that electro-graphitic carbon would be included within the disclosed group and would therefore function in the same manner as claimed by Applicant. In regards to claims 4, 5, 10 and 11, since it is well known for a turbine to operate at the claimed temperatures and Naudet discloses substantially the same structure as claimed by Applicant, it is the position of the Examiner that the variable vane system of Naudet would be capable of operating at the claimed temperatures and therefore anticipates the claimed subject matter.

Art Unit: 3745

CONCLUSION

Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Hansen et al. (4,834,613) discloses a graphite bushing used to lubricate a variable vane trunnion.

Contact Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dwayne J. White whose telephone number is (571) 272-4825. The examiner can normally be reached on 7:00 am to 4 pm T-F and alternate Mondays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edward Look can be reached on (571) 272-4820. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
